

## Making a frame using the pen tool.

1. Using the pen tool with a line width of about 5, draw 2 lines to represent a thin twig. You can add an effect to this line to make it look like wood or rope etc.

2. Join these two lines together to form one side of the frame.

3. Copy and paste this side piece three times so you have 4 sides of the frame. Arrange them into a square or oblong shape flipping the sides if required.

4. Using stencils or punches cut shapes from the backing paper to make some flowers and leaves. Place them on the frame to make a pleasing arrangement.

5. Drag the completed frame into the frame tab.

6. You can make round and oval frames using this method, just curve your original lines to fit.
