

Making a glass vase with a patterned paper

1. Draw a quick shape and then click on "edit points". Add new points where needed and move them until you have a shape you like. Make a copy of this shape, convert it to a bitmap and keep it to one side.

2. Once the shape is how you want it add a clear glass effect to the original image.

3. Bring in the background paper and resize it and place it behind the glass image until it is positioned how you want it.

4. Place the original image under the glass so you get it in the same place and remove the glass one.

5. Select both the paper and the image and click on "Arrange/Crop to top" You will now have an image from the paper which you can place behind the glass image and group together. The vase shape must be on top of the paper.

6. Draw a transparent oval shape, and place this over the top of the vase to make the top opening.
